1. Circle the things that might naturally live in or near a wetland:

![Images of various wetland inhabitants]

2. Review this foodweb:

Plants that live in wetlands provide food and homes for lots of living things.

Tiny ‘bugs’ or ‘mini beasts’ (also called macroinvertebrates) feed on nutrients in water and water plants.

Bugs are food for other living things, like bigger bugs, frogs, fish, birds and yabbies.
3. What is a macroinvertebrate and why are they important?

4. What is the most interesting thing you learned from the waterbird/macroinvertebrate poster?

5. Which part(s) of this food web are not right?

6. Write down the three facts that you discovered in your research about the Macquarie Marshes.

7. How many plants and animals are shown on the poster as living in the Marshes? _______________

8. Which of the following are harmful to wetlands?
   - decomposers
   - fertiliser
   - mud
   - floods
   - sticks and rocks
   - rubbish

9. What are some of the important things that wetlands provide or do for people, plants and animals?
