Notes: # Annual actual take from regulated rivers and watercourses

- The annual diversion data includes interstate trade. For example, where water is traded from NSW to South Australia, the diversions are reported in South Australia
- The annual diversion data excludes losses due to conveyance along the river to the point of offtake, but for irrigation areas, it includes conveyance losses from the point of river offtake to run in supply channels

*NSW Murray diversions are split into three components: a, b, and c.

a) Murray Irrigation Limited (MIL)

b) Western Murray Irrigation (WMI)

c) Other refers to regulated river diversions excluding MIL and WMI

**Victorian Murray is split into two components: A and B, of which A is then further subdivided into three purposes: A1, A2 and A3.
