Table 11.1 details the volume of allocation (i.e. temporary trade) trade from one Cap valley to another Cap valley. This also includes an adjustment for entitlements that are permanently traded. This value adjusts the annual Cap target for each Cap valley. Sign convention follows positive (+) value as volume traded in and negative (-) value as volume traded out.

Cap Register: 1 July 1997 to 30 June 2018

Table 11.2 details the values for adjustment of annual Cap targets for use of water by the environment water. The annual Cap targets as determined by hydrological models include the use of both consumptive and environmental water. Since compliance with Cap is confined to consumptive use, an adjustment is made to remove environmental use.

Cap Register: 1 July 1997 to 30 June 2018

Table 11.3 Annual Cap targets adjusted for trade and environment (GL)

* Modelled Inter-valley trade (IVT) is deducted from annual cap target for Lower Darling. Further work by NSW and the MDBA may amend this approach.

Table 11.3 details the annual Cap target for consumptive water after adjusting for trade and environmental water in Table 11.1 and Table 11.2.

Cap Register: 1 July 1997 to 30 June 2018

Table 11.4 details the actual annual diversions that occurred in each year for each Cap valley. Diversions are calculated as defined in the Diversion Formula Register and includes any water taken or diverted during that water year, regardless of whether it originated from carry over, allocations in that year or purchase (i.e. trade in from other valleys).

Cap Register: 1 July 1997 to 30 June 2018

*A special audit, in November 2017, by the Independent Audit Group as per Clause 16 of Schedule E of the Murray Darling Basin Agreement determined that the long-term diversion cap was not breached.

** Due to a restrictions policy in these water years, the ACT was unable to accrue Cap credits

Table 11.5 details the annual balance after deducting actual diversions in Table 11.4 from annual Cap targets in Table 11.3 for each Cap valley. Sign convention follows positive (+) value as a credit and negative (-) value as a debit.

Cap Register: 1 July 1997 to 30 June 2018

Table 11.6 details the values from Table 11.5 on a cumulative basis since Cap commenced. The cumulative balance is the compliance test under the Cap for most, but not all valleys.

* The values for Metro Adelaide has been removed from this table to make reporting consistent with the approach applied to other Cap valleys that do not cumulate credits. Previously the annual Cap credit was reported for each year.

Cap Register: 1 July 1997 to 30 June 2018

Table 11.7 details the Cap compliance information for Metropolitan Adelaide. A model is not used to determine the Cap target in the Metropolitan Adelaide, instead diversions for the past five years are compared with a target of 650 GL as per schedule F of the Murray Darling Basin Agreement.

* This value was omitted from 2016–17 reporting

Cap Register: 1 July 1997 to 30 June 2018

*TPWT Report = Transition Period Water Take Report

[^] Under schedule E of the Murray Darling Basin agreement Metro Adelaide does not cumulate credits and so will no longer be reported in this table

Table 11.8 compares the cumulative Cap credits for the last water year as determined using the best available data provided for the current water year, with that determined using the best available data provided in the last water year. The Cap register is updated each water year with the best available information which may lead to variations between Cap. Variations could be due to a more current model run (for determining the Cap target), changes in trade and environmental adjustments and improvements in accuracy of actual diversions.
